

Basic List Questions

1. Write a program to create a list by taking input from the user and print the list.
2. Write a program to insert an element at a specific index in a list.
3. Write a program to merge two lists into a single list.
4. Write a program to remove a specific element from a list.
5. Write a program to remove an element from a list using its index.
6. Write a program to find the index of a given element in a list.
7. Write a program to count the number of occurrences of an element in a list.
8. Write a program to find the sum of the first and last elements of a list.
9. Write a program to calculate the sum of list elements up to a given index.
10. Write a program to calculate the average of odd numbers in a list.
11. Write a program to print all prime numbers present in a list.
12. Write a program to print the next prime number for each element in the list
13. Write a program to print the list in reverse order.
14. Write a program to find sum of any two elements which is equal to key value

Maximum & Minimum

15. Write a program to find the largest number in a list.
16. Write a program to find the second largest number in a list.
17. Write a program to find the third largest number in a list.
18. Write a program to sort a list without using any built-in sorting functions.
19. Write a program to find the Nth largest element in a list.
20. Write a program to print the first four smallest missing elements from a list

Searching

21. Write a program to perform linear search on a list.
22. Write a program to perform binary search on a sorted list.
23. Write a program to return all index positions of a searched element in a list.
24. Write a program to check whether a list is sorted or not.

Math on arrays

25. Write a program to find the LCM of all numbers in the list.
26. Write a program to find the GCD of all numbers in the list.
27. Write a program to find the factorial of each element in a list

Frequency

28. Write a program to find the frequency of each element in a list.
29. Write a program to calculate the backward frequency of elements in a list.
30. Write a program to print frequencies of each element without repetition.
31. Write a program to find the most frequently repeated element in a list.

32. Write a program to find the unique element in a list.
33. Write a program to find the least unique element in a list.
34. Write a program to print elements whose frequency is greater than 1.

Rotation

35. Write a program to print all rotations of a list (clockwise)
36. Write a program to print all rotations of a list (anticlockwise)
37. Write a program to rotate a list by k positions.(anticlockwise)

SubLists

38. Write a program to print all possible sublists of a list.
39. Write a program to find all subarrays whose sum is equal to a given key.
40. Write a program to print all possible subsequences of a list.

Practice

41. Write a program to convert a list of digits into a number.
42. Write a program to convert a number into a list of digits.
43. Write a program to reverse a list and also reverse each element in the list.
